47 Trinity Avenue, S.W.  
Atlanta, Georgia 30334

SUBJECT: 125th. Annual Report  
Central State Hospital

Dear Doctor Bush:

We present herewith a summary of achievements at Central State Hospital during the fiscal year ending June 30, 1968. Detailed reports of the various departments will be found elsewhere in the report.

The resident population continues to decline with the average daily population down to 10,196 as compared with 10,942 last year making a net change in resident population of approximately 746. Total gains were up 440 patients to 11,434. These included 4,564 returns from convalescent leave, 68 transfers into the hospital, and 6802 admissions of which number 4,908 had not previously been admitted to Central State.

Losses totaled 12,264 and included 1859 discharges direct from the hospital, 8852 placed on convalescent leave, 652 transfers out of the hospital, and 901 deaths. During the year 3968 patients were discharged from convalescent leave.

Some significant new programs started during the year. An intensive examination and psychiatric treatment ward for geriatric patients, begun under the Medicare program in November, is very active and treats to capacity. Two wards in the Boland Building were remodeled and structured for adolescent patients with funds provided by the General Assembly. These funds also permitted the best staffing pattern in the hospital with a ratio of  $1\frac{1}{2}$ :1. The wards were completed in late June and the children started moving in on the first of July.

A reorganization program is underway in the unit for mentally retarded. Eventually, there will be nobody over thirty years of age in this unit. Considerable renovation is going on with Boone 4 already painted and furnished with floor tile. The air conditioning of the flat top buildings is underway and is expected to be completed early in the next fiscal year.

While staffing patterns in most departments are considerably better than last year, there is still much room for improvement and none are adequately staffed.

The psychiatric residency training program continues to be effective. An encouraging sign is that five of the six physicians recently finishing their residency training decided to remain at the hospital as staff physicians.

Accredited training programs are functioning in psychology, social work, clinical chaplaincy, music therapy, occupational therapy and recreation. A senior resident from the Mayo Clinic in Ophthalmology continues to rotate through the hospital every six months for special training in eye surgery.

The Department of Psychology is accredited at the highest level by the American Psychological Association. Emphasis has been focused on improving evaluation and treatment by the initiation of more scientific and efficient techniques. Services for the patients have been greatly increased by obtaining additional psychology technicians with high qualifications, training them to function at more complex levels and carefully directing and supervising their work by qualified doctoral and master level personnel. During the year the staff evaluated 4,000 patients and 800 were given psychological treatment monthly. The behavior modification program and the special education program are continuing to expand within the financial structure provided.

The appointments of Dr. William R. Howard to the position of Clinical Director of Special Therapies and Dr. W.T. Smith as Clinical Director for Psychiatric Services has achieved coordination and synchronized functioning heretofore lacking in these activities.

Communication at all levels has been facilitated, especially with staff physicians and unit directors. Dr. Howard directly supervises the departments of music therapy, volunteer services, occupational therapy, remotivation, recreation therapy and horticulture therapy and also provides liaison between the office of the superintendent and the office of vocational rehabilitation. Dr. W.T. Smith is responsible for the oversight of seven psychiatric units and all psychiatric treatment services in these units.

Nursing Service continues to be the most inadequately staffed division in the hospital. As of the end of this fiscal year, the hospital had 116 registered nurses, 59 licensed practical nurses and 1709 attendants. During the year 17 new nurses were employed; however, 15 discontinued employment for a net gain of two. During the year 104 new attendant positions were made available for psychiatric aides; however, with 142 wards this is less than one attendant per ward. The affiliation program has undergone some reorganization as a result of conversion to the associate degree program, as well as low recruitment and high attrition rates so enrollment in the program has been lower this year than in the past; however, 203 student nurses completed the course in psychiatric nursing during the year.

For the second consecutive year there has been no loss of personnel in the Department of Religious Services. Such consistency of staff indicates employee commitment as well as attractive professional opportunities. With the projection of plans for specialty units in the hospital the need for a significant increase in personnel is emphasized. The ratio of one chaplain to 200 patients, particularly in active treatment areas, will be a future goal of this department. During the year the department conducted 13,736 pastoral visits to the wards as well as 1576 informal and 1109 formal worship services. An average of 1625 patients attend the ten Protestant worship services each Sunday morning. Fifty services for Jewish patients, 250 services for Roman Catholic patients, and 52 services for Episcopal patients were conducted during the year.

Governor Lester Maddox conducted groundbreaking ceremonies for a new wing of the Veterans Building which will make possible expanded and more efficient services when completed.

Reorganization of the Medical Record Department is bearing fruit. The streamlining of the patient information center by the use of mechanized equipment, the elimination of many formerly kept duplicate files, and an accurate daily movement and census report has eliminated much of the uncertainty regarding patient population statistics. The clerical division of the Georgia Public Health Association presented a plaque to this department recognizing outstanding achievement for the year 1967-68.

Continued basic research under the direction of Doctors Keeler and Mellinger is continuing. Dr. Rex Courtney has joined the staff as neurophysiologist.

Recreation therapy continues to expand in staff and program. The department conducts approximately 90 recreation activities per week with more than nine hundred patients participating. Regular recreation preference service and behavior reports are furnished the psychiatric teams on the patients participating in the recreation department program.

The occupational therapy department made several improvements to clinics during the year. Three clinics were moved to better locations and two were air conditioned. Work is progressing on rebuilding the Veterans Building occupational therapy clinic as well as on planning and equipping a new occupational therapy building as a final phase of decentralization. A total of 3,297 patients were under treatment in occupational therapy programs during the year and 40% of these have shown a high degree of improvement.

One of the most active programs in the hospital is remotivation which formed 901 patient groups with 11,197 patient participants. The groups met for 10,812 sessions. The average number of active aide remotivators in any given month is ninety which shows an extreme shortage of aide personnel in the various units. As a regional training center for the southeastern states, an institute was held for more than sixty participants from surrounding states and institutions as far away as Oklahoma.

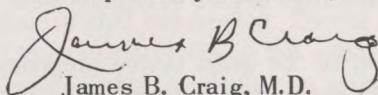

Volunteer Services continues to provide active and effective volunteer programs in garden therapy, Alcoholics Anonymous, art therapy, recreation therapy, and in the social service department. Other programs include the library service, a scouting program for both Boy Scouts and Girl Scouts, the forgotten patient program, the apparel shop, and a hospital wide Christmas program.

The public information department, in conjunction with the Department of Psychology continued the seminar programs for high school and college students. Some 3500 of these young people spent a day in the hospital as well as many adult groups and professional groups who also visited the institution during the year.

Wide reorganization and intense evaluation and analysis of the hospital's structure, organizational, policy and procedures systems, time and work studies and work flows are being conducted by various committees under the direction of Rod Clelland, Assistant Superintendent for administrative services. These programs are already proving their worth in increased efficiency, elimination of duplication, conservation of equipment and effective utilization of personnel and space.

All in all it has been a good year and the prospect is bright for continued progress in fiscal 1969.

Respectfully submitted,

A handwritten signature in dark ink, appearing to read "James B. Craig". The signature is fluid and cursive, with the first name "James" and last name "Craig" clearly distinguishable.

James B. Craig, M.D.  
Superintendent

## CLINICAL PSYCHIATRY

In addition to the usual programs, problems, and activities the psychiatric service has had a few changes to note.

An intensive examination and treatment psychiatric ward for geriatrics patients was begun under the Medicare Program. This was approved and began on November 16, 1967. This has been very active and examines and treats to capacity.

January 16, 1968, the vacancy for a Clinical Director of Psychiatric Units was filled by Dr. W.T. Smith and he has been active in supervision and coordination of psychiatric in-patient and out-patient treatment programs.

Better psychiatric care for children is being arranged with the help of public interest and money appropriated by the legislature for additional personnel and improved facilities.

The psychiatric service is also working actively with other groups in the hospital toward accreditation of the hospital, formulating definite policies and procedures and getting prepared to make full use of the computer system.

Activities of many of the psychiatrists on the various committees of the hospital works toward mutual communication and coordination.

## PHYSICAL HEALTH

During the past year, remarkable progress has been made in renovating the Jones Hospital. A complete new X-Ray Department was begun, construction finished, and equipment was being installed as of the termination of the year. Plans have been made and the necessary funds appropriated to remodel another ward to contain a delivery unit, a labor room, and a new nursery for children. The Out-Patient Department is being completely renovated and is expected to be in operation within a few months.

**CLINICAL SERVICE:** During the past year due to over-all reduction of population of the Central State Hospital, there has been a slight

reduction in the utilization of the beds, so that we are now able to take care of most of the cases most of the time without overcrowding. During peak admission, periods minimal overcrowding may occur.

**SURGICAL SERVICES:** Over all, the surgical services are operating well. We are lacking some specialists, noticeably E.N.T. and Urology. This is not due to the lack of funds, but to the fact that we have been unable to recruit these personnel. We shall continue our efforts to do so. An increase in the number of operating room personnel would markedly increase the number of operations performed.

**OBSTETRICS AND GYNECOLOGY:** This Department is well staffed and is doing an excellent job. We are hoping to get a grant in order to increase the number of Pap smears we are doing for the entire Central State Hospital.

**PATHOLOGY:** There have been no great problems in this area. We are short one Pathologist and are attempting to recruit him.

**LABORATORY:** An excellent job is being done by this Department, and it is our hope that we will be able to add some automated equipment to make it more efficient.

**RADIOLOGICAL SERVICE:** As noted above, the Radiological Department is completely renovated and the ills concomitant with this that plagued us during the past year, will disappear when we move into into the new department.

**CONSULTANTS:** During the past year, consultants from the Medical College of Georgia were active in the following departments: (1) Medical, (2) Surgery, and (3) Ob/Gyn. Consultants not affiliated with the medical school were active in Dermatology, Ophthalmology, and Otolaryngology.

**NURSING SERVICE:** The Nursing Service is still inadequate, however, every effort is being made to remedy this situation. We have received funds to add additional personnel. It is almost impossible to recruit registered nurses. We will make other arrangements to make up the present deficiencies.

## GENERAL SERVICES

HOUSEKEEPING DEPARTMENT: The patient areas have been kept exceptionally clean. This year some improvement in other areas can be made with the addition of other personnel. This is being considered at the present time.

MAINTENANCE DEPARTMENT: The only outstanding area to be considered for renovation in the coming year is the Pathology Department.

ADMISSIONS AND RECORD ROOM DEPARTMENT: This Department is operating efficiently at the present time.

COMMUNICATIONS AND INFORMATION: There is need for more secretarial help. Needs in this area are now receiving intensive study to remedy this situation.

PREVENTIVE MEDICINE: In addition to the Hospital's Out-Patient Department and Clinic Services, the following examinations are done:

- (1) Hemoglobin and Hematocrit - semiannually
- (2) White blood count with differential is done with count below 4,000, above 10,000 - semiannually
- (3) Urinalysis - semiannually
- (4) A blood sugar and BUN - semiannually
- (5) PKU on newborn infants
- (6) Spot checks to reveal any significant parasitic infestation of the patients
- (7) Survey of all patients by miniature x-rays for Tuberculosis-annually
- (8) Ophthalmological survey for blindness and eye disease is continuous
- (9) Biannually, each female patient is checked for carcinoma of the uterus and breast by physical examinations and a Papanicolaous smear. It is hoped that this can be done annually on all patients resident in the hospital and on all new patients on admission
- (10) The following are done as needed: Influenza immunization

- (11) Among children, polio vaccine, mumps and other immunization as needed. The following are recommended:
1. Tetanus immunization for all patients in the hospital and all patients admitted
  2. Electrocardiogram every two years on all patients over 50
  3. When an Otolaryngologist is available, a survey for deafness and ear disease should be made. Where possible, hearing should be restored.

## PHARMACY

The department has continued to expand during the fiscal year in personnel, equipment and service to patients. A new service includes mailing drugs to patients who are being referred to recently established Aftercare Clinics of the County Public Health Centers. Drugs are now being supplied to 26 of these clinics at a cost for the past year of \$65,000.

Two additional pharmacist positions and one for a pharmacy intern have been allocated to the department as a result of a recent study by two specialists.

A new program initiated during the past year makes possible regular inspections of all drug rooms throughout the hospital. Plans have also been completed for a satellite pharmacy in the Jones Hospital which will be activated as soon as remodeling is finished and equipment now on order arrives.

A new high speed electronic counting device and an electric water still have added greatly to the efficiency of operation.

The pharmacy is currently concentrating on a large-scale pre-packaging program for tablets and capsules which will simplify the distribution system. An inventory system based on automatic recorder points is being set up and this will become more sophisticated as the data processing department continues to enlarge.

Dr. George W Taylor, Chief Pharmacist, was named Hospital Pharmacist of the year by the Georgia Society of Hospital Pharmacists and received a commemorative plaque. He was especially cited for his interest and enthusiasm in continued education of hospital pharmacists.

## DENTISTRY

During the past year, much time and effort has been devoted to expanding the dental facilities. Modern completely equipped two-chair dental operatories are being constructed in five hospital units and smaller facilities are being placed in many of the remaining buildings of the Hospital.

These facilities will provide a means of treating bed patients, criminally insane patients, tubercular patients, and other patients when it would be inadvisable or difficult to accomplish this treatment in the central dental clinic. Also, adding these new facilities will result in a decrease in the amount of time that attendants spend in accompanying patients for dental appointments and transportation problems will be alleviated in buildings located a far distance from the central dental clinic.

An operating room will be constructed within the central dental clinic in the near future which will be used by the consultant in oral surgery in rendering oral surgical procedures to selected patients. Also, six operatories in the central dental clinic are being modernized with new equipment. The central dental clinic will continue to service patients adjacent to its area and an overflow of patients from other areas of the hospital.

A program is being developed to provide uncooperative patients with various types of dental treatment, including operative procedures, with the use of general anesthesia in the hospital operating room. A dentist who is highly qualified in these procedures has been employed. Special equipment needed for this project has been obtained.

During the past year, the Council on Hospital Dental Service of the American Dental Association granted continuance of approval of the dental service at the Central State Hospital.

Much attention is being focused on preventive dentistry. Comprehensive ward oral hygiene programs have been started on many of the wards of the hospital, and the staff has provided topical fluoride applications to the teeth of most children and young adult patients. The preventive dentistry program also includes the rendering of prophylaxes to the patients of the Hospital including semi-cooperative and non-ambulatory patients.

During National Children's Dental Health Week a poster contest was sponsored by the Dental Department for the patients. The Occupational Therapy and Remotivation clinics lent assistance with the contest and encouraged the patients enrolled in their programs to participate. A display of the many posters was held in the Hospital auditorium and was attended by patients, employees and the public.

Noteworthy progress has been made in rendering bedside dental treatment to non-ambulatory dental patients, especially the many children and other patients confined in Unit F-2. Portable equipment including specially equipped ambulance stretchers, portable dental units and a mobile cabinet have been obtained for rendering treatment to these patients. Also, with the use of pre-medication procedures many patients whose cooperation is limited have received bedside dental treatment.

Dr. William T. Johnson, Director of the Branch of Dental Health, State Health Department, and members of his staff have been most helpful in providing consultation, program evaluation and recommendations. A full staff was maintained throughout the year. An additional position for one dentist was added during the year which now makes a total of nine positions for dentists on the staff.

## NURSING SERVICES

At the end of fiscal 1968, Nursing Service personnel included 116 registered nurses, 59 licensed practical nurses, and 1709 attendants. Recruitment for registered nurses still remains a primary problem. While 17 new nurses were employed during fiscal 1968, 15 registered nurses left for one reason or another making a net gain of two.

On July 1, 1967, 104 new attendant positions were allocated which helped considerably; however, with 142 wards this was not even an average of one attendant per ward.

On October 1, 1967, all nursing service personnel began working on a forty hour week. This has imposed quite a handicap on the wards due to the already existing shortage of personnel.

## NURSING EDUCATION

The affiliation program in psychiatric nursing has undergone some revision due to the conversion to the associate degree program. While enrollment in the program has been lower this year than in the past, 203 student nurses completed the course from the following schools—Georgia Baptist Hospital, 53; Georgia Southwestern, 17; Hall County Hospital, 23; Macon General Hospital, 28; The Medical Center, Columbus, 20; Piedmont Hospital, 51; Warren A. Candler Hospital, 10; and one graduate nurse also took the course. Every effort is being made by the affiliating schools to increase recruitment and lower attrition and it is believed that these steps will mean an increased enrollment in the future years.

Mrs. Maidana K. Nunn, director of the Psychiatric Affiliation Program, was granted educational leave to begin graduate study toward the Ph.D. degree and is now at Boston University. Mrs. Beatrice M. Tribble, R.N., A.B. assumed the direction of the program in her absence.

Faculty members participated in a number of workshops, seminars, conferences and other meetings pertaining to psychiatric nursing. They also acted as resource and liaison persons in locating appropriate material and visited several affiliating schools at the invitation of their faculties. Faculty members also represented Central State Hospital at conferences on "Expanding Dimensions in Nursing Practice" in Philadelphia, the American Nursing Association Convention in Dallas, Texas, a two week seminar on the subject "Teaching Psychiatric Nursing in Diploma Schools" held in Lexington, Kentucky, and were active in reviewing and evaluating books and periodicals for use in the affiliation program.

## INSERVICE EDUCATION

Monthly inservice programs in the units were significant in their effectiveness in improving nursing competence during the year. A twelve week course for attendants continues to operate with 177 attendants certified during the past year. A Neighborhood Youth Corp nursing aide program was started in October and 96 enrollees received this training. Other training programs held during the year included a 20 hour course for policemen who later assumed duties as ambulance

drivers, a 16 hour course for institutional orderlies assigned to the Jones Hospital, and an orientation program in which 77 attendants and practical nurses were enrolled and which was the first attempt at mass orientation conducted by the department.

## PATIENT REMOTIVATION SERVICE

In its third year of operation as a new departmental discipline, this department, now under the Director of Special Therapies, has made considerable progress as a therapeutic modality. Its goals continue to be those of achieving effectiveness through involvement of more people in the program, by continuous educational activities, and in its role as a Remotivation Regional Training Center for the Southeastern states.

The development of the program within the hospital continues to be approached on three levels---the unstructured non-formal activities relating to the basic functions of human beings, the formal group structured type of simple conversational activity relating to features of every day living free from emotional difficulties and the advanced group type concentrating on in depth conversation, discussion about current living with its accompanying problems.

Nine hundred and one patient groups have been formed totaling 10,812 sessions with an estimated 11,197 patient participants. The average number of patients, hospital-wide, participating in non-formal, unstructured types of Remotivation in any given month of this year is 1582. The average number of active aide Remotivators, hospital-wide, in any given month of this year is 90. This number shows the extreme shortage of aide personnel in the various units.

Collaborating with Volunteer Services and a cosmetic company, the cosmetics program approach has fully evolved this year with the participation of an estimated monthly average of 1242 men, women and children.

In coordinated programs-- 1) with the Dental Department, 50 dental health posters were prepared by Remotivation participants thereby increasing personal interest in dental hygiene, 2) with Recreation Therapy Department, bus rides, picnics and swimming in Lake Sin-

clair, 3) with Horticulture, gardening, 4) with Vocational Rehabilitation, ward government, 5) with Nursing Services, most unstructured non-formal activities such as personal grooming, hair styling, games, music, dining manners, rudimentary crafts, birthday parties, etc. and 6) with Dietetics Department, sack lunches for picnics, ice cream parties and improvement of dining room manners.

Some outstanding Remotivation activities which have produced significant results are: the ward improvement with antiquing furniture and sewing circles in Walker and Green; community singing, simple crafts, ice cream parties, picnics, the collection of unusual plates, creation of a game room and a library in Howell, the coordinated activity of swapping a number (25 to 50) of men and women once a week in Howell and Holly to spend a day in either building; the ward government in Cabaniss where 46 members make up rules and regulations and plan their activities; two new approaches --1) sensitivity training has been introduced in the intensive wards of Washington and Bostick with good results, 2) the "nightclub" an evening activity, coordinated by all disciplines, involving both men and women in Bostick and Washington and the charm classes in Washington; and the interdisciplinary activity in Boland and Boone of their annual Christmas play and pageant involving some 100 participants.

As the Regional Training Center in the Southeastern states, a training institute was held for more than 60 participants from surrounding hospitals and institutions, including Oklahoma and Arizona. A Southeastern Remotivation Technique Organization was formed during this institute. Staff involvement of some 35 members representing the various disciplines participated in the teaching of the various styles, forms, approaches, skills of Remotivation. Patient participation totaled approximately 200 during the laboratory sessions for the three successive days. Powell, Walker, 10th Ward, Howell 3, Arnall 2W, Holly, Allen, Whittle, Rivers 4, --Medicare, Greenhouse and the Rehabilitation Center were used as laboratories for the technique of Remotivation. Tours of interest were conducted for outside participants which included Chapel, Music Therapy, Greenhouse, Rehabilitation Center, Special Education, Children's Unit, Central Kitchen, Behavior Modification Wards, (Allen and Whittle), and Boone Mental Retardation. The institute was geared to meet the needs of the aging person.

Fifteen enrollees of the Neighborhood Youth Corps have undergone training under trained Remotivators and have conducted a variety of non-formal activities.

The Remotivation Department continues to participate in the lecture requirements for psychiatric residents, psychiatric aides, ministers, music therapists and interns, occupational therapy interns, dietetic interns, and neighborhood youth corps. These include 201 persons who attended from 1½ hours to 3 hours. Also, 423 visitors were given one hour orientation on the technique of Remotivation. A number of lectures to various community groups throughout the state were presented. Lectures were presented also at Georgia College in Milledgeville and Mercer University. The coordinator has participated in 2 professional conferences-- the American Educational Research in Chicago and the American Nurses Association in Dallas. The Southeastern Remotivators' Newsletter continues to be the medium of communication among other mental hospitals, nursing homes in the southeastern area and other interested remotivation centers throughout the country upon request. A Remotivation brochure has been published and distributed to interested hospitals.

## MEDICAL LIBRARY

Two circumstances contributed to support the constant endeavor to have the holdings in the Medical Library reflect the latest available up-to-date information: On the one hand, the Medical Library received an amount of four hundred dollars as share from a National Library of Medicine grant to the Georgia Department of Public Health, an amount which gave the restricted budget a desirable boost; on the other hand, a one thousand dollar grant, which the Psychiatric Department obtained from a commercial source and invested in books, actually amounted to considerable improvement of the holdings in the Medical Library, since the books purchased with this amount were almost all lodged in the Medical Library. Besides, various other departments have funds to buy books. The Medical Library profited from the purchases of these other departments.

The past year saw a new development in the librarian's world. The publications' explosion and with it the innumerable requests for reprints to the National Library of Medicine made it necessary to

divide the country into eight library regions, with the provision that a library has to draw first of all from the holdings in its region, even if it means paying for copies instead of receiving them gratis as was the case formerly when the National Library of Medicine furnished the xerox copies. In this new and changed situation three regional libraries gave a very welcome service, the State of Georgia Department of Public Health Library, the library of the VA Hospital, and the library of the Communicable Disease Center, all of Atlanta and all providing the Medical Library of CSH and its patrons with photostats at no extra cost.

The National Library of Medicine grant to the Georgia Department of Public Health included funds for a two day institute, giving librarians under the Public Health Department in Georgia the opportunity to participate in a very concentrated course on Medical Libraries and library materials. Through the participation of the CSH librarian in this workshop much new and valuable information was made accessible.

Generally the work in the CSH Medical Library has greatly increased. All books bought at the expense of the Georgia Department of Public Health in any department of CSH are processed, classified and cataloged in the Medical Library and an inventory is kept concerning them and sent to the department in question for confirmation once a year. In this way the holdings of twenty departments are recorded and accounted for at present. Since January 1968 monthly Library Committee meetings have decided on all questions concerning the Medical Library, including selection of materials to be approved for acquisition or disposal.

## CLINICAL PSYCHOLOGY

### CLINICAL SERVICES

It has become increasingly apparent that one of the primary goals of psychology in general, and our Department in particular, must be renewed determination to establish each of our evaluation and treatment techniques on a firm foundation of scientific research. At this stage of development, no discipline in the field of mental health can claim to have any technique or theoretical orientation which can provide all of the answers. It is no less incumbent on us, however, to insist on empiricism and an accurate evaluation of whatever treatment

techniques are endorsed by this Department. Constant efforts are made to improve psychological services and to initiate new programs which will be beneficial to the patients and to the hospital.

During the year, the staff evaluated approximately 4,000 patients. Psychological treatment was given to approximately 800 patients monthly. Staff members spent many hours in teaching and research.

In addition to the usual clinical services of evaluation and treatment, the Psychology Department was administratively responsible for a number of special programs: The Treatment-Education Program for Children; the program for patients with multiple handicaps; the Behavior Modification Programs; the training of interns in Clinical Psychology; and Education in Clinical Psychology.

Emphasis has been increasingly focused on improving evaluation and treatment by initiating more scientific and efficient techniques in both of these areas. Also, a concerted effort has been made to greatly increase services by increasing the number of technicians, obtaining technicians with higher qualifications, training them to function at more complex levels, and carefully directing and supervising their work by qualified doctoral and master level personnel. It is anticipated that our scholarship program, combined with new recruiting techniques, will afford us a greatly increased number of well-qualified technician applicants, as well as personnel at higher levels.

#### BEHAVIOR MODIFICATION PROGRAM

The Behavior Modification Program at Central State Hospital was officially launched in January 1966. Since that time, the program has continued to develop under the direction of Dr. Robert F. Heap. The Behavior Modification Program was featured in an article appearing in the April, 1968 issue of the Saturday Evening Post dealing with new treatment techniques for the mentally ill. Special emphasis has been placed, during the year, on the education and training of professional and sub-professional personnel in Behavior Modification techniques.

Dr. Teodoro Ayllon, who initiated one of the first Behavioral Modification programs in the United States, paid a visit to Central State Hospital and conducted two seminars. In March, 1968 the National

Institute of Mental Health sponsored a two-day Regional Workshop at Central State Hospital. The following month, Dr. Ogden Lindsley conducted a two-day workshop on Contingency Reinforcement Techniques. Since then, classes have been held with Nursing staff personnel on the pinpointing, recording, and consequating of abnormal behavior.

Due to the lack of adequate supervisory personnel and funds for ward stores, the Behavior Modification program has not met its growth potential. However, it is hoped that within the near future these difficulties can be alleviated.

A new experimental program has just recently been initiated in a ward of profoundly retarded patients to assess the degree to which we may be able to institute some self-care and verbal behaviors in these patients.

### SPECIAL EDUCATION PROGRAM

The number of patients, 18 years of age and under, admitted to this institution during the last year increased at a rate comparable to the previous year. There were 503 underage patients admitted during 1967, and 265 patients admitted during the first six months of 1968. This latter figure would suggest that the total underage admissions for 1968 will be about 550. During June, 1968, there were 645 such patients in residence in this institution. All of these patients receive a screening battery of psychological tests, and the results of these tests are employed in considering the child for appropriate school placement. Complete psychological evaluations are written on patients in response to a formal request from the ward physician. Approximately 175 children are enrolled in the school program.

The Special Education Program is divided into several areas. Eight teachers, plus an administrative lead teacher, currently teach the Educable Mental Retardates; 64 children and adolescents are in these classes. A certified teacher plus two attendant-teacher-assistants conduct classes for 40 Trainable Mental Retardates. Many patients are awaiting placement in this section, and the availability of trained personnel for this patient population continues to represent the most serious deficiency in the school program.

The program for emotionally disturbed patients includes 14 teachers. Two of these hold classes for children in the 6-10 age bracket; five hold classes for children in the 10-15 age bracket; and four hold classes for adolescents in the high school age bracket. An Adult Education Program assists several hundred patients in being vocationally rehabilitated. In addition, the staff also includes a full-time principal, an educational diagnostician, a curriculum director, one psychology intern, and one clinical psychologist.

Three wards in the Boland Building have been allocated to the school program, and two of these were renovated and air-conditioned in the Fall of 1966. Classes were moved from the Children's Building to this new section in which there are 21 classrooms, a library, plus office and storage space. The third ward is virtually completed and will house the TMR Classes, all physical education facilities, plus office and storage space. A home economics department, principally furnished by Vocational Rehabilitation, will also be located in this section, and this will afford concrete domestic experiences for the school children.

Federal funds were available to the school program, under the Education Improvement Laws. A Reading Laboratory is being purchased, and this holds promise of substantially improving reading efficiency. An evaluation team was hired through these funds, and two distinguished professors critically observed the school program. These funds were also employed for cultural enrichment trips, and the students were exposed to a variety of new experiences.

Continuous effort is made not only to provide a good education for children at the hospital, but also to modify their behavior in meaningful ways in the classroom with the teacher serving as the Therapeutic Agent. Additionally, coordination is stressed between the classroom and the ward where the child lives so that a consistent approach will be followed in changing the child's behavior. There has been steady progress in centralizing the children within the hospital, and it is expected that further improvements will be made this year. A new, separate school building is urgently needed because of the increased admission of children each year.

It should be noted that this program would not be possible without the active participation of the State Education Department who

pays the teachers' salaries and offers consultation services to our program. The Baldwin County School System has been very helpful in developing and maintaining our program.

### PROGRAM FOR MULTIPLE HANDICAP PATIENTS

Progress continues to be made in this program which was set up in 1964, originally for those patients suffering from speech, hearing, or visual problems in addition to their mental illness. In November of 1965, the scope of this program was enlarged to include patients suffering from any physical disability. The first patient in this category was a man who had suffered a cardiovascular accident and was admitted on November 30, 1965.

Since the ward was opened, a review of admissions reveals that the percentage of the total number of patients admitted fell into the following categories:

Totally Blind .....	14%
Partially Blind .....	6%
Totally Deaf .....	18%
Partially Deaf .....	28%
Speech Defect .....	18%
Multiple Sensory Handicap .....	6%
Miscellaneous Physical Handicaps ...	10%

Screening of the hospital population for suitable candidates for this ward is on a continuous basis, and to date more than 1900 patients have been screened.

There are special services available for the handicapped. For those whose deprivation is in the visual field, the program includes, in addition to psychological treatment, Talking Book Machines and "books" which are provided by the Library for the Blind. For those who have mastered Braille, publications and books in this media are provided. For the blind, as well as for those patients suffering losses in any of the other major areas, corrective surgery is available in the medical unit of the hospital.

For those patients whose sensory loss deals with speech, speech evaluation and therapy is provided by consultants from the University

of Georgia Speech and Hearing Clinic in Athens, Georgia. Periodic visits by these consultants provide limited therapy needed by these patients in their efforts to learn intelligible speech patterns.

For the deaf and hard of hearing, special services include periodic visits by teachers skilled in the use and teaching of sign language. It further includes evaluation by audiologists from the University of Georgia Speech and Hearing Clinic. Recommendations of these audiologists are followed. In some cases, it is possible for Vocational Rehabilitation to provide hearing aids that partially alleviate the hearing loss. With the use of a sign language interpreter, group therapy for the deaf was initiated in 1965.

For all patients on the Multiple Handicap Ward in the Yarbrough Rehabilitation Center, Vocational Rehabilitation is an integral part of the program. The main goals with each patient are to provide psychotherapy, special services, and Vocational Rehabilitation so that individuals can function outside of the hospital at a level compatible with their abilities and physical limitations. In addition to having behavioral and physical problems, many of the patients are chronic and institutionalized. Consequently, an attempt is made to help them with problems of daily living such as personal grooming, budgeting of money, taking care of personal belongings, and accepting limits and responsibilities so that they will stand a better chance of adjusting to life outside of the hospital. A ward government has existed on both male and female wards since the initiation of this special program. Each patient is given as much responsibility as he or she is able to handle effectively. A concerted effort is made to help each patient learn that his behavior can earn certain privileges on the ward, in the building, and permit him to make phone calls and to go home.

Improvement in patients treated on the ward to date can be classified as follows: Approximately 71% have shown a marked improvement, 20% are rated as unimproved, with the remaining 9% showing continued regression from their premorbid level.

#### CLINICAL TRAINING

This year the Psychology Department had five new interns in residence with two former interns accepting positions on the staff

following the receipt of their doctorates. One of the goals of the training program is to promote the students' understanding of, and adherence to, scientific methodology. The interns have been placed on a rotating schedule which allows each intern to gain experience in a Behavior Modification setting, working with physically handicapped patients, dealing with children and adolescents, and participating in the more traditional experiences of interviewing, testing, and psychotherapy with adults and children which are found in most state hospital settings. Another observation room has been constructed in the Whittle Building of Unit 5 which will allow close continuing supervision of testing and psychotherapeutic endeavors.

Two significant policy decisions were made this year relating to the Clinical Internship Program. Many of the students who are now on scholarship will be required to complete their internship at another facility and repay their stipend at the doctoral level. Secondly, it was felt that due to the limited number of qualified supervisors, the number of training interns would be reduced at the hospital. This will permit closer and higher-level supervision. Moreover, it was decided that only those students ranking in the top 25% of their graduating class would be considered for internships.

### EDUCATION IN CLINICAL PSYCHOLOGY

The educational endeavors of the Psychology Department are divided into in-service teaching and public education. The in-service teaching includes brief encounters and formal classroom activities. Under the supervision of the Director of Education, classes are held with psychiatric residents, student nurses, social work aides, psychiatric attendants, and music therapists covering such topics as history and review of psychology, abnormal psychology, psychotherapy, etc.

The public education program is carried out in conjunction with the Public Relations Department and is geared toward orienting the public to their state hospital and the importance of mental health problems. College and university classes, high schools, lay organizations, schools of practical nursing, etc., who visit the hospital are oriented to the functions and practices of the hospital, tour wards, and participate in verbal interchanges with the patients.

The over-all goal of this program is to dispel many erroneous notions held by the public concerning the State Hospital and emotionally disturbed individuals and to inform the visitors in regard to the many urgent needs at the hospital and within the State. During the past year, over 4000 people spent a full day at the hospital under this program. In addition, special groups such as the Georgia Mental Health Association, Alcoholic Study Groups, and Ministerial Associations visited the hospital for special programs organized to meet their special needs.

## RESEARCH

The Psychology Department has for the last few years consistently been one of the most productive departments in the hospital with respect to research and publication in professional journals. During the year the departmental staff had 12 publications accepted by professional journals. Many other studies are in various stages, including several which have been submitted for consideration. Approximately 20 research studies have generally been in progress at any one time.

## PSYCHIATRIC SOCIAL WORK

The Staff of the Social Work Department on July 1, 1967 consisted of the Director, an Assistant Director, one Social Worker II, nine Social Worker I's, twenty-two Social Work Aides and eleven Secretaries, for a total of forty-eight. On June 30, 1968, in addition to the Director and the Assistant Director, the staff consisted of four Social Worker II's, nine Social Worker I's, twenty-two Sociological Technicians, two Social Work Aides and twenty Secretaries, totaling fifty-one. This constitutes an increase of three with a significant increase at the II level—those with supervisory and/or administrative skills.

The Department also sponsored sixteen staff members on educational leave in various stages of completing their Master's Degree in Social Work supported by stipends from the Hospital. This is twice the number supported the previous fiscal year. The schools attended included West Virginia University, Wayne State University, The University of Michigan, Tulane, Florida State University, Smith College, Atlanta University and the University of Georgia. Also, during

the year ten social work students were placed in the Student Unit sponsored by the University of Georgia for field placements. In addition, twenty undergraduate students from Mercer University and Georgia College at Milledgeville received field training experience in the Department.

The placement of patients in Nursing Homes throughout the State continued to be a high priority program. Over 500 patients were placed, 362 of whom were through the sponsorship of the Baldwin County Unit of the State Department of Family and Children Services, located at the Hospital. Also, several areas of the Hospital not previously provided with adequate social work services were assigned full-time staff members. This included the Medicare Ward, the Rivers Buildings, the Psychiatric Out-Patient Clinic, and the Sheltered Workshop, a program of the Vocational Rehabilitation Department.

Department statistics reveal a total of 11,123 letters were written during the year to relatives, community agencies and other interested parties. 6,453 Social History Questionnaires were mailed and 75 case records were abstracted and sent to community agencies. This constitutes a three-hundred percent decrease over the previous year, reflecting the work of the Medical Records Department. For this same reason, the number of forms completed (insurance, Social Security, Department of Family and Children Services, etc.) was 1,849, representing a fifty percent decrease over the preceding year.

Finally, the Social Work staff held 18,935 interviews with in-patients and/or their families and 8,966 interviews with out-patients and/or their families, 1,513 group sessions were conducted with patients which varied from orientation of new patients, ward government and the preparation of patients for transfer, to social group work treatment. As a result of this activity 2,187 patients were released from the hospital through social work planning. This included placement with relatives, independent living arrangements, nursing home placements and out-of-state transfers.

## RELIGIOUS SERVICES

For the second consecutive year there has been no loss of personnel in this department. Such constancy of staff indicates employee commitment as well as attractive professional opportunities. Although only one additional clinical chaplain was budgeted, leaving the level of pastoral coverage only slightly above minimum, two factors account for increased departmental efficiency. First, as mentioned, the clinical chaplaincy personnel remained the same, indicating competency in a staff which continues to practice its profession in the same setting.

Second, one of the clinical chaplains was promoted to Assistant Chief Clinical Chaplain with the responsibility of coordinating and directing programs of clinical pastoral education and pastoral services. With his duties focused entirely in these areas the clinical chaplains were freed from many tasks which had been theirs in addition to work within their units.

With the projection of plans for specialty units within the hospital the need for a significant increase in personnel is cast into bold relief. The old APA suggested minimum ratio of one chaplain to 500 patients has been replaced with a 1-200 ratio, particularly in active treatment areas such as are planned for this hospital. The physical facilities (chapels) are available. There is a waiting list of well-qualified job applicants. An efficient department structure is established and operative. Continued momentum is contingent largely on budget possibilities.

**PASTORAL CARE SERVICES:** The image of the church and the community was presented to the patients by the chaplains, who routinely made pastoral visits to the wards. Thirteen thousand, seven hundred and thirty-six of these visits plus 1,576 informal religious meetings and 1,109 formal worship services in the chapels added to the patients' feelings of familiarity and certainty in the hospital setting. An average of 1,625 patients attended the 10 Protestant worship services each Sunday morning. Fifty services for Jewish patients, 250 services for Roman Catholic patients, and 52 services for Episcopal patients were conducted during the year. A major addition this year was sets of altar coverings for each chapel. Designed with different religious symbols and colors these worship aids were used to visually mark special occasions and the change of seasons in the church year.

**CLINICAL SERVICES:** An emphasis on group pastoral counseling marked a significant development in this area of service. Clinical Chaplains and chaplain interns work as co-leaders of religious therapy groups. Last year there were 1,969 individuals in pastoral counseling and 24 groups in process. Gathering and interpreting religious data on patients was rendered more efficient and extensive by the formulation and use of a guide for religious histories and evaluations. The uniformity brought about by the use of this guide increases the ease with which other members of the hospital staff may utilize religious data on the patients.

**IN-SERVICE EDUCATION:** The services of consultants in pastoral theology, clinical pastoral education and hospital chaplaincy were utilized to maintain a high level of staff motivation and to up-date staff knowledge of current trends in theology and psychology of religion. Monthly staff seminars were continued, with the papers presented by staff members copied and bound for future reference. Opportunities for continuing education in relevant fields of study were made available for clinical chaplains with more than two years tenure. One chaplain participated in an eight-week advanced theological seminar at a theological seminary.

**PROFESSIONAL EDUCATION:** This department continued to offer training at various levels of clinical pastoral education. The emphasis was placed on the clinical pastoral internship which is designed for the clergyman who seeks advanced training in pastoral ministry to the mentally ill. There remains a back-log of candidates applying for these positions, eight of which were budgeted. Clergymen from Texas, Louisiana, Mississippi, Alabama, Illinois, Michigan, North Carolina and Georgia participated in this program. With an acceptable academic structure provided for the intern seminars on psychology of religion and religion and mental disorder, Columbia Theological Seminary began granting academic credit to interns who were also enrolled in their Master of Theology program. Thirty books in pastoral care, psychology of religion, sociology of religion, and psychiatry were purchased from donated funds and added to the chaplaincy library.

**STAFF AND COMMUNITY RELATIONS:** This department maintained its policy of providing lectures on religion and mental illness and the clinical chaplaincy to other training programs and to other departments' personnel. A total of 57 such lectures was given.

In addition to two introductory workshops for community clergymen, a one-day conference on the Church and Mental Retardation involved fifty church officials and pastors. Ten youth groups from churches and colleges were given special tours and lectures to introduce them to the work of the Department of Religious Services.

RESEARCH: During the year this department engaged the services of a religious research consultant on a monthly basis. With this consultation and that from our own psychology department several research projects were in progress. One of these was a factor analytic study of a group of religious histories and evaluations, designed to establish significant categories by which religious data can be more effectively evaluated and interpreted.

## MUSIC THERAPY

Fiscal year 1968 has again seen further growth and development in both personnel and program in the Music Therapy Department. Three additional music therapy aide positions were created in this year's budget, thus providing the number of positions necessary to place at least two persons in each unit music therapy program as well as expand program in the instrumental therapy area. Seven interns completed Music Therapy Clinical Training during the year. These students came from Florida State University, Texas Woman's University at Denton, Texas and the University of the Pacific at Stockton, California. Of these interns, two have remained on the professional staff of the music therapy department following their internship. At the conclusion of the fiscal year the music therapy department has a total of twenty-four full-time positions and four training positions. Of this number eight are professional music therapists.

A specialized program in music therapy for mentally retarded and emotionally disturbed children has developed and become one of the outstanding programs of the music therapy department having proven itself through observable results in numerous children prescribed to this program. In May, 1967, Cordelia R. Livermore, RMT was named Chief of Music Therapy, Children's Services and during this year two additional persons were assigned to that area, Janice Rogers, RMT and W. Frank Willis. As it became obvious that this program was both dynamic and therapeutically productive, the Unit administration provided it with additional space creating one of the finest music therapy

areas in the entire Hospital with specific rooms for individual therapy group therapy, a classroom and offices. The appropriation of the additional funds for children in the Spring provided a music therapist position which has been filled and is included in the total program of Music Therapy, Children's Services.

The music therapy program for children attempts to educate the mentally retarded child, through the use of several music media, to his highest possible potential. For any kind of permanent establishment of such goals much time is needed. However, obvious results in many children involved in this program have long since established its worth as one of the outstanding therapy programs in the Hospital. During the year this children's unit was evaluated by a team from the American Association for Mental Deficiency at which time the music therapy program in that Unit was cited for special commendation by this group.

For some years it has been one of the goals of the Director of Music Therapy to establish an extensive program in guitar, principally centered around that form of music known and loved by great masses of people as Country Music. To that end, in the fall of 1967 we were fortunate in adding to our staff Floyd Howard, Jr., a man well-known throughout this local area as one of the outstanding country musicians, who for over twenty years has directed and played with country music combos and has had vast experience in this field. In addition we were able to hire James Bedingfield, a man of outstanding ability on the guitar and extensive experience in the area of country music. These two men together with John H. Hendricks, who has been on our staff for five years, have already developed an outstanding program in this extremely popular area of music over the past eight months.

In February the first full length country music show was held in our auditorium. The building was filled to capacity and the response of the patient audience was unmistakable and so dynamic that the second such show was held in May with equal response from the patient audience. Several patients performed with the instrumental therapy staff members in this last production. More country music shows are planned for the future because of their tremendous success.

In addition to the production area which requires only minimal amount of time in this particular program these staff persons are involved in each of the Unit Music Therapy programs, working both with individuals and with groups, using guitar as the media, with outstanding results.

The annual performance of "Messiah" by George Frederick Handel was presented in the hospital auditorium on December 19. Soloists for this performance were Jane Murray, Soprano; Jeannette Warren, Contralto; Robert Bennett, Tenor, and Richard Wall, Bass. Members of the Atlanta Community Orchestra, Joseph A. Kirschner, Conductor travel from Atlanta to play the performance which was conducted by the Director of Music Therapy. This annual presentation has come to be a meaningful part of the Christmas Season both for the hospital and the local community.

On Good Friday, April 12, 1968 the music therapy staff presented "The Seven Last Words of Christ" by Theodore Dubois in the Central Chapel for the hospital community. This traditional work appeared to mean much to the many patients who attended the performance and assisted in making the Easter Season more meaningful for them. Soloists for this performance were Saralyn Latham, Soprano; Roger S. McNair, Tenor; Herbert P. Goldsmith, Bass with Dennis McCleary, Minister of Music at the First Baptist Church, Milledgeville as organist.

One of the most unusual and outstanding music programs ever to appear on the stage of the hospital auditorium came to us last July in the appearance of the Third Army Soldiers Chorus under the direction of Captain Carl W. Bond. This concert held the attention of the patient audience well over an hour and was hailed as one of the finest such programs ever to come to this Hospital. It was sent to us through the generosity and courtesy of Lieutenant-General Lewis W. Truman and we sincerely hope that it will be possible for this group to again appear on our stage for the hospital community.

On March 8 the Rainer Twins, Alice and Clarice, made their third appearance on our concert stage for our patients. This outstanding team of piano-duettists have been generous enough to share their time and talents with us whenever their concert tours bring them into

Georgia. Playing only music written for one piano, four hands, principally in the classical idiom, these young girls are able to hold the attention of the patients through an entire concert and still have the patients applauding for more.

In late April we heard an outstanding program in the Central Chapel by the Wake Forest University Choir, conducted by Dr. Thane McDonald, from Winston-Salem, North Carolina. This group, on tour through the Southeast, was appearing at one of the churches in Milledgeville and generously consented to sing a program for our patients at the same time—one which will be long remembered by all who attended the performance.

In October the National Association for Music Therapy held its annual conference at the Dinkler Plaza Hotel in Atlanta, Georgia. The Director of Music Therapy was local chairman for arrangements for that conference. Assisted by Emily Stevens, RMT, from the Georgia Mental Health Institute and many members of the music therapy staff of Central State Hospital this National conference was executed smoothly and reported to be one of the outstanding conferences of the National Association for Music Therapy.

During the year the Director of Music Therapy has spoken to a number of Civic Clubs, colleges and held a number of conferences with groups of students interested in music therapy. In November he appeared on the program of the Georgia Baptist Church Music conference held at Toccoa. At present he is representative to the Executive Committee of the National Association for Music Therapy of the Southeastern conference of the National Association for Music Therapy.

It is anticipated that in the coming year the instrumental therapy program will further develop and expand in several areas, and that the year will also see the establishment and development of a definite program in research in music therapy at Central State Hospital.

## OCCUPATIONAL THERAPY

The present staff of the occupational therapy department includes one Director, one Stenographer, one Storekeeper, and 51 O.T. Aides, with 5 vacancies. Two University of Florida interns completed their affiliations. Occupational Therapy personnel are now included in all Unit planning sessions, diagnostic staff, building inservice, etc., as well as furnishing materials and guidance to other disciplines as required.

A number of clinic improvements have been made. Three clinics were moved to better locations, and two were air-conditioned. One clinic has been completely reorganized with new furniture, paint, tile, etc., and some painting and rearrangement of storage space has been done in the Salesroom.

Work is progressing on rebuilding Veterans O.T. Clinic. Meanwhile, the program has been resumed in one of the day rooms in Cabaniss Building. Work has gone forward on planning and equipping a new O.T. Building as a final phase of decentralization.

### PROGRAMS

The total number of patients under treatment in occupational therapy during 1968 was 3,297. Statistics show that 40% of the total caseload have shown a high degree of improvement. New programs include Medicare, a special program for EST patients, and three additional ward programs. Among the new crafts introduced to add variety to the program were needlepoint, rake-knitting, crayon on cotton, and projects of foam plastic.

Music, Recreation, and Occupational Therapy combined to present four performances of the Christmas pageant in Unit 6. Curtains for the stage there were made in occupational therapy. Patients continue to enjoy a wide variety of socializing experiences initiated by O.T. personnel, as well as those activities held cooperatively with other disciplines.

Patients in all O.T. clinics participated in the Dental Poster Contest. First prize and first runner-up were O.T. patients. Six hundred favors were made for the Garden Therapy Annual Meeting. A luncheon was given by Garden Therapy for the patients who participated in this project.

Projects made by the patients as part of treatment were exhibited and sold at meetings of the Medical Auxiliary of Athens, and the Richmond County Medical Auxiliary of Augusta. An exhibit and sale was also held by the Junior Woman's Club of Gordon.

A doll house was made for use by the Music Therapist in Unit 6. Other items made or repaired by the patients and issued to the wards include bench pads, name tags, toys, picture frames, upholstery, ceramics, etc. A total of 1230 articles were so issued.

### EDUCATION

The inservice training program included three hours orientation for each new employee and 32 craft classes with an average attendance of 30 individuals for a total of 1920 class hours. Eleven staff meetings were held during the year. Nine staff members observed EST, two attended a conference on Mental Retardation, and nine attended adult education classes in academic subjects, sewing and upholstery.

The department filled lecture requirements for student nurses, psychiatric residents, psychiatric aides, public health nurses, clergy, music therapists and interns, remotivation trainees and new employees. A total of 629 persons attended from one to three hours.

### PROFESSIONAL ACTIVITIES

The Director belongs to the American Occupational Therapy Association and the Georgia Occupational Therapy Association. During the year she completed her term as president of the latter organization. Five staff members are associates of the Georgia O.T. Association.

Department members were active in many community organizations. Community relations by the department included participation in the Cancer Parade, and providing a gift shop in Monticello with patient items for sale.

Sixty three pieces of furniture have been upholstered and 19 quilts finished for the public. Numerous donations of craft material have been received, as well as a donation of draperies which was turned over to Volunteer Services for use in dayrooms.

## RECREATION THERAPY

The Recreation Therapy Department has experienced an enlargement of staff, new program ideas, and an increase in participation. Recreation Therapists are now being accepted as part of the Treatment Team and are included in patient screening, unit planning sessions, etc.

There are nine Recreation Therapists and eight Recreation Leaders on the staff. In addition to the regular staff, three interns affiliated with the program this year; and several groups of Volunteers associated with the program.

This Department joined forces with other departments in conducting special programs for the patients. We cooperated with the Volunteer Services Department in the providing assistance at picnics, parties, and visiting groups whenever requested. The Department was also responsible for the erection of Christmas scenes throughout the hospital grounds.

A Recreation Therapy Program was started in the Children's Unit, Rivers Unit, and separate programs for Units 2 and 3.

Through an In-Service Education Program, regularly scheduled sessions are conducted for the staff and two consultants visited the Department and delivered lectures to the Department. The Recreation Therapists lectured to other disciplines, and staff members as requested, and provided demonstrations and lectures for visiting groups.

Fifteen members of the Department attended the Annual Conference of the Georgia Recreation and Park Society. At this conference, the Director of Recreation Therapy was elected President Elect of the Society and will become President at the Annual Meeting in November of 1968. In April the Director was one of five persons named to the first Board of Recreation Examiners for the State of Georgia. During the year he presented several lectures for colleges, civic groups, and the like.

The Department conducts 90 activities per week with more than 900 patient participants. Again our Halloween Carnival was very successful, and thoroughly enjoyed. We continued our Intramural

Sports Program, tripled the number of outings at the Georgia Military College Lake Lot, and the use of the Log Cabin for picnics and outings increased.

A new event last year was a street dance and free lemonade on July 4th in the morning and an all-star softball game in the afternoon. Both of these activities were for all of the patients that were able to attend. An unusual activity this year was four performances of The Hoxie Bros. Circus. This was a joint undertaking of this Department and the Volunteer Services Department. It was well received by the more than 3,000 patients who attended the performances. We have continued to do the Recreation Preference Survey and Behavior Reports on the participants, in our program.

The Recreation Program of each Unit is planned by the Unit Recreation Therapist to meet the needs of the patients in their unit; therefore, each Program is unique to that unit. We strive to provide all the patients with a program of purposeful and worthwhile activities.

## VOCATIONAL REHABILITATION

Fiscal year '68 saw little increase in the Vocational Rehabilitation staff but many improvements in effectively serving the vocational needs of CSH patients. The total staff of 65 was reorganized to provide for more supervisory personnel and for better dispersion of the staff throughout the hospital. In most units there is now a Rehabilitation Counselor for each building with an admission ward, making a counselor accessible to all newly admitted patients.

The number of patients served was substantially increased over the previous year. Overall, there was an increase of approximately 60% in the number of patient/clients served. Two thousand patients were placed on counselors' caseloads, and of these 1660 were placed in vocational training and adult education, also 1150 were placed in the Work Readiness Training Classes and 849 worked under the supervision of CSH employees in the Work Adjustment Program. A total of 1189 patient/clients received one or more services and were followed up by counselors in their hometowns or through the Rehabilitation Residence facilities.

Partially responsible for these increases was the new Unit Home and Family Management Classes. These are held in classrooms furnished like an average residence taught especially for the chronic female patient. These classes are held in Unit buildings.

The Work Readiness Training Class is considered a very important contribution to patients. Its purpose is orientation to VR and discussion of good work habits, importance of continuation of medication, use of community resources, etc. Class attendance figures show that over half of all patients placed on caseloads were enrolled in these classes.

The Work Evaluation and Training Center was awarded its first subcontract in April and began production with seven patient/clients. Additional subcontracts have been secured and up to fifty clients are now being taught good work habits and assembly-line procedures through actual production. The income from these subcontracts provides payment for these clients. Up to one hundred patient/clients can be served through the WET Center when additional subcontracts are obtained.

Vocational Rehabilitation was requested to administer the payment of patients for services rendered to the hospital and this has been termed The Patient Rehabilitation/Employment Program (PREP). As of this report, this program is to begin July 1, 1968 and between 500 and 1,000 patients are expected to be enrolled.

The sixth Rehabilitation Residence was opened in Savannah during the year, augmenting the existing facilities in Atlanta, Augusta, Albany and Columbus. One hundred ninety-nine patients were transferred to these residences in fiscal '68. The seventh and final residence should open during the coming year in Macon.

This report indicates the effectiveness of the working relationship of two entirely different State Agencies -- The Department of Education, Office of Vocational Rehabilitation and the Department of Public Health, Central State Hospital.

## RESEARCH

Clinical Research at Central State Hospital is carried on by members of the staff specialized in various professional disciplines and certain investigations of the Division of Research in the areas of Psychopharmacology, Medical Genetics, and Neurophysiology.

The first objective of the Division of Research, with offices and laboratories in the Yarbrough Rehabilitation Center, is to provide a laboratory setting in which patients having had some training or being temperamentally suited for laboratory work may become readjusted and learn laboratory techniques with a view to finding employment in a laboratory work situation on the outside.

Teaching is the second responsibility in importance. Lectures are given to psychiatric interns, college students, service clubs, and others. Consultation is provided in Medical Genetics for physicians and relatives of patients.

A continuing research project in Medical Genetics includes a chromosome study of mentally retarded patients having genetic syndromes. The genetic alteration of behavior trends is a second field of interest.

The special physiological and behavioristic correlates of red hair have been studied. Answers to questionnaires make it very probable that a number of behavior traits are altered. Sensitivity to drugs and narcotics makes advisable an extensive study of the red hair constitution in relation to alcohol.

Several drugs are being tested to see if they will remove the psychotic symptoms of "schizophrenic" foxes. A triple gene backcross has produced eight gene types segregates in a total of some fifty fox pups. These are to be tested for homovanillic, and vanillylmandelic acid in relation to fear.

On a grant from the Parapsychological Foundation made jointly to Dr. Robert van de Castle of U. of Virginia and Dr. Keeler, a study of Cuna Indian earwax types was carried out. Five hundred and three persons were examined, only 8.8% of whom have normal sticky earwax. The great majority secrete a substance that becomes hard and forms a large grain. This deciduates and falls out. Some intermediate types occur. Fungus infestation may be associated with the dry granular type of secretion.

Dr. Mellinger reports an important discovery in our Psychopharmacological laboratory, a spectrofluorometric method for the determination of homovanillic acid in urine. Assay of urinary homovanillic acid (HVA), the major metabolite of dopamine, has become of increasing interest because of the discovery of dopamine-secreting tumors, the probable importance of dopamine metabolism in Parkinson's disease, and the possibility that this catecholamine has an important physiologic function of its own, in the visceral organs and in the central nervous system.

When homovanillic acid (HVA) is treated with potassium permanganate, a relatively strong fluorescence emerges. Stepwise, oxidation first increases the intensity of fluorescence to a maximum, after which further oxidation causes a decrease. Half as much permanganate is needed to reach peak fluorescence as is required for a return to the starting level. The maximal intensity of the emerging fluorescence was used as the titration point for quantitative analysis. The interferences of naturally occurring fluorescences in urine require extraction with ether and further separation by paper chromatography before fluorometric titration. The advantage of spectrofluorometry over colorimetry for the determination of HVA is described.

Dr. Rex Courtney has joined the staff of the Research Division as Neurophysiologist. Miss Sue Berry has been appointed as Laboratory Science Trainee.

## VOLUNTEER SERVICES

As the function and program of the Department of Volunteer Services becomes better known throughout the hospital, more demands for services are made for both volunteers and materials which are not available through the regular hospital budget. This has been due to the desire to serve and provide for the patients and the excellent results the Department has had in alerting communities to the needs.

THE GARDEN THERAPY PROGRAM is a vital part of the volunteer program. Volunteers from the Milledgeville area continue to staff the twelve patient garden clubs as they have over the past eight years. In addition to their responsibilities with their own clubs, these volunteers have actively recruited locally and have promoted the project on a statewide basis through visits to garden clubs, District meetings, and State conventions. Through these means, the \$6,000 needed annually is raised. These funds are handled and expended by the local Therapy treasurer who is also a volunteer.

It is essential that a member of the Volunteer Services staff be available to attend the patient Garden Club meetings in a liaison capacity and to assist in determining ways in which volunteers may be more effective in the Therapy Program.

The Director of Volunteer Services attends the monthly Board meetings, some District meetings, the State Conventions, and conducts tours for Garden Clubs desiring to visit the hospital. The individual garden club members have played an outstanding role in providing factual information to citizens throughout the state.

In addition to their work with the patients, Garden Therapy Volunteers have been interested in beautification of the hospital campus. Examples are the fountain in front of the Powell Building, landscaping around the Central Chapel, special plantings at the Garden Therapy office and Green Building.

The current project is the establishment of an eight-acre park near the Rivers Hospital. This is to include parking facilities, pavillion with cooking facilities, restrooms, walk ways, and as a very special feature - a garden for the blind. The total project is estimated to cost \$75,000. This is another example of the sincere desire of the Garden

Club of Georgia, Inc., and the Garden Therapy Volunteers to provide additional facilities to make the hospital a more pleasant place for the patients and visitors.

ALCOHOLICS ANONYMOUS has functioned uninterrupted for the past eight years with the program being sponsored by members from seven counties in the vicinity of Central State Hospital. They provide the speakers and much of the literature that is distributed. Membership in other groups throughout the state also contribute to the literature fund which is handled by a member of the Milledgeville group.

Volunteer Services notifies wards of the meetings, arranges for transportation, for adequate personnel to escort patients, for refreshments for the all-important social hour following the formal meeting, and assumes general supervision.

In measuring the success or benefit provided by these sessions, it is interesting to note that 75% of the speakers are ex-patients.

ART THERAPY is growing and it is the ultimate goal to have at least one volunteer art instructor in each of the units. Presently, there are four classes which meet weekly. An adequate supply of materials have been available for use in these classes. The annual art exhibit of the patients' accomplishments proved most interesting.

In addition to adult volunteers from the Milledgeville area, the Art Department of Georgia College has been enthusiastic about their students, both major and non-majors, participating in this program.

The art students of Perry Schools International, Atlanta, painted and gave 35, 4 X 8 foot murals suitable for decorations in the Unit for the mentally retarded.

THE RECREATION THERAPY DEPARTMENT has utilized volunteers extremely well and is constantly requesting additional aid in parties, programs, and group activities. For the past five years, students from Wesley Foundation and YWCA of Georgia College have worked regularly with groups of patients in two different areas. Church organizations, fraternal, civic and service clubs have planned parties for the patients.

It is also of interest to note that contact for long range planning with the Department of Health, Physical Education, and Recreation of Georgia College has been made and there is a keen desire to participate. Majors are currently assisting in the Recreation Inservice Education Program which involves teaching and demonstrating to Recreation staff techniques of teaching the various sports to the patients who will be involved in the intramural leagues.

Future plans are to use the hospital as a laboratory-type setting for the HPER majors and have the students work directly with the patients under the supervision of the Recreation personnel.

Annual picnics are given by the Elbert County and Upson County Mental Health Associations for the patients from their respective counties. The Monroe County M.H.A. had their first picnic for their patients. They have expressed their intentions to make this an annual affair. These groups bring a picnic lunch and a bus load of relatives and friends to visit with the patients who have been transported to a central location. Because of the tremendous value of this program for both the families and patients, a concerted effort is being made to have other Mental Health Associations sponsor picnics for their patients. This again, is a cooperative effort of Recreation and Volunteer Services.

Of particular interest is the three-ring circus that was scheduled for four performances on the hospital grounds on May 1 and 2. This was made possible through monetary gifts of ninety individuals, organizations, industries, and business concerns. The Recreation Therapy Department did an outstanding job in scheduling and arranging for the patients to attend.

The Columbus Jaycettes accepted a special project of providing bicycles for the children's use. A total of 52 bicycles (new and re-conditioned) were delivered to the hospital. These have provided many hours of pleasure for both the boys and girls.

Sixteen passes each on two separate occasions were given by the Atlanta Braves for special groups of patients to attend home games in Atlanta.

Other Special Therapy Departments are interested in having volunteers work along with their staff. Music Therapy utilizes volunteers who are talented and/or trained in some phase of music very effectively.

GEORGIA HAIRDRESSERS AND COSMETOLOGISTS ASSOCIATION are continuing to make a tremendous contribution to patients in this institution with direct service to the patients and through gifts of equipment and supplies. Because of their contacts at the hospital, many of the individual volunteers have interested other organizations with whom they are associated in providing materially to the patients.

Efforts continue to be made to obtain assistance from the Georgia State Beauty Culturists League (the negro hairdressers organization) through having work days at the hospital for the non-white patients. To-date the organization has not taken positive steps in this direction.

THE SOCIAL SERVICE DEPARTMENT is using adult volunteers for interviewing families in the Psychiatric Out-patient Clinic and for interviewing patients and personnel in connection with screening patients for the sheltered work-shop program under Vocational Rehabilitation. In addition to the above, college students from Mercer University and Georgia College majoring in Sociology are working with the Social Work staff in the performance of their duties.

Volunteer Service has cooperated with the Department of Family and Children's Services in providing kits filled with toilet articles and personal items to be distributed to patients being transferred to Nursing Homes. This has proved extremely beneficial to the recipients.

In several areas where patient government groups have been under the supervision of Social Workers, furnishings have been obtained to make their living areas more attractive and livable. The patients were given the opportunity to meet with interested volunteer groups to tell them of their plans, needs, and later to express appreciation for their gifts.

LIBRARY SERVICE is one area which needs considerable attention. An active effort continues to be made in locating a qualified

librarian for the position which was founded in 1968. Primary consideration should be given to establishing one library in each unit. Upon completion of this objective, a smaller library should be set up in each building, along with book-cart service to wards where patients are not at liberty to frequent the libraries. Each library can be staffed with patients referred through Vocational Rehabilitation who will be directed and supervised by the Librarian. The Librarian will need a staff clerical person whom she can depend upon to take care of correspondence, office routine, and typing in connection with each library. Magazine and newspaper subscriptions will be further emphasized when libraries are established. A quantity of used magazines are received regularly and are distributed throughout the hospital for use on the wards.

THE SCOUTING PROGRAM for Unit-2 has become an integral part of that unit. Both the Girl Scout Troop and the Cub Scout Troop have demonstrated that scouting can be beneficial to the mentally retarded. Both troops have been uniformed through the Patients' Benefit Fund. It is of special interest to note that the Leader of the Cub Scouts is a female aide who works with these children after duty hours. The Girl Scouts participate in a modified program which also includes day camping, cookie sales, and group community meetings.

A group of interested citizens from Marietta, Smyrna, and Atlanta area are incorporating under the name "Volunteers for Forgotten Children". Members of this group have received orientation from the personnel of Unit-2 which was planned by the Director of Volunteer Services and the Unit Administrator with the professional personnel in the Unit. They have begun serving and expect to have volunteers six days per week, working on Boone 4 and 5. Their activities range from the actual feeding of the children to entertaining small groups with games, story telling, playground activities, and just walking. Through their community contacts, these people are able to provide clothing, materials, and supplies needed for their activities with these patients as well as items that can be used elsewhere in the hospital.

THE FORGOTTEN PATIENT PROGRAM is one of the most meaningful projects in existence for those who do not have income from any source. An average of 200 patients are served each month through

this project. After assignment, a detail record is kept on each of these patients and personal acknowledgements are made to each contributor. This is time consuming but extremely important for the continuity of the program and accounting for the articles sent for the patients.

THE APPAREL SHOP continues to be one of the most beneficial services offered the patients. In addition to indigent patients residing in the hospital who need personal clothing for activities as well as therapy, a tremendous number of patients transferring to Southwestern State Hospital have been outfitted as well as those leaving the hospital under the auspices of Vocational Rehabilitation to live in the residences.

CHRISTMAS is a major activity which requires a minimum of eight weeks for the planning, gift distribution, programs and acknowledgments. The Director of Volunteer Services coordinates the total Christmas Program. Recreation Therapy, Occupational Therapy, Music Therapy, Religious Services, Nursing Service, Business Office, Patients' Benefit Fund, and Public Relations are directly involved. Gifts are provided through the Municipal Association (M-Day), Mental Health Associations, church, civic, and service organizations and interested individuals in a quantity sufficient to assure a gift for each patient. In addition to the gifts, twelve denominations have parties for patients of their faiths. These parties are planned by the people of Milledgeville and are financed by the churches throughout the state.

In addition to the denominational parties, there are three groups that have special parties at which they serve hundreds of delicious homemade cakes. Another very special occasion was a party for deaf patients given by the Crusselle Freeman Church in Atlanta.

Miss Laura Watson, who has been the primary source of Christmas cards for patients to send to their friends and relatives for the past thirty years, provided 20,000 cards for this purpose, along with beautiful scrapbooks for the patients' enjoyment. The Girl Scouts in the Milledgeville area, as one of their service projects, stamped the cards to be mailed with stamps provided by Patients' Benefit Fund.

Donations in general continue to be an important area of the Volunteer Services Program. The Director is kept currently informed of the needs by hospital personnel. This makes it possible for projects to be immediately suggested to groups interested in service projects. In this category, furnishing Day Rooms continues to be an outstanding service provided by the United Church Women. In the past ten years, this organization has furnished approximately ninety day rooms at a cost in excess of \$100,000.

Toilet articles, cosmetics, fans, hair dryers, televisions, record players, sewing machines, washing machines and dryers, draperies, rugs, rocking chairs, ice cream freezers, fishing equipment, chair tables, electric razors, bedspreads (for special projects), percolators, and beauticians' supplies have been among some of the numerous contributions that have been made for gifts directly to the patients or for use in staff services to the patients.

The Student Council of South Gwinnett High School, Snellville, was desirous of giving assistance to the children in the hospital. In their drive they collected a truck load of toys and \$1231.41. These funds are being used for the purchase of heavy-duty toys, playground equipment, movie tickets, and spending money. The latter two items are used as means of compensation for good behavior, good school work, good grooming, and doing their share of housekeeping chores normally expected of any children. This has filled one of the greatest needs that has existed in this unit.

The excellent publicity given this department by Public Relations from the state and local levels is deeply appreciated. Through the press, radio, and television, the public has not only been made aware of the needs but has also been kept advised of the services provided by volunteers for the patients.

The objectives of this department are fourfold: To supplement staff with volunteer assistance; to provide patients with community contacts; to help educate the public regarding mental health; to provide projects for community organizations.

## PUBLIC INFORMATION

The Public Information and Education Department continues to face an ever-increasing work load due to expanding departmental requirements of the institution and the increasing utilization of audio-visual and photographic technics in education and training programs.

Mary Byrant Archer completed work on her Master's degree in Mental Health Information at Syracuse and returned to the department as Information Officer 2. Her present duties include most of the photographic work of the department, the writing of news releases, feature stories, and the preparation of educational material and recruitment brochures required by the professional departments. Brochures were completed for psychology, social work, remotivation, religious services, volunteer services, the special education school, recreation services and music therapy.

The public education program featuring seminars conducted with the cooperation of the department of clinical psychology continues to attract large numbers of high school and college students as visitors to the institution. The Public Information director visits the school prior to the students' visit with information designed to present a general view of the hospital program, suggest things to look for and methods of approaching and conversing with patients. At the visit to the school, the PIO also deals with the institution's stipend and scholarship programs, as well as those available through other Health Department Institutions, with the object of stimulating young people to investigate the many excellent opportunities available in the mental health career field.

These visits to the schools, which have received the unqualified endorsement of the state's guidance counselors, give the young people a dual exposure to the needs of the mentally ill, as well as informing them of new treatment technics, and the inadequacy of present staff and facilities.

During the past year the public information director spoke to 96 classes at 38 high schools, lectured to 59 classes at 28 colleges and universities and addressed 32 classes at other institutions such as vocational schools, hospital schools of nursing, civic clubs, church groups, etc.

The director was reelected for a second term as president of the National Association of Psychiatric Information Specialists.

An exceptional year was enjoyed in coverage in the news media. A number of feature stories appeared in the Atlanta press, as well as on the radio and TV. Editorials in the hospital's Weekly Bulletin attracted much attention, several of these were reprinted in toto by newspapers, commented on by radio and TV newsmen and requested for reprint by professional magazines.

If the department is to continue to function at a high level of production efficiency, a competent photographic technician is essential. It is not good personnel utilization for a person with a Master's degree to spend 35 hours during a ten day period doing routine darkroom work.

## PERSONNEL SERVICES

There was a marked increase in total employment during the fiscal year ending June 30, 1968. The number of regular, active employees on June 30, 1967 was 3279 and on June 30, 1968 was 3645, an increase of 366. The largest gains were in the sub-professional nursing, clerical, service, labor and trades categories. There was a modest increase in the number of physicians and registered nurses and other health disciplines and in managerial employees. The unusual increase in total employment was due in part to new hires to activate the Adolescent Wards and to replace employees transferred or promoted into this program.

A major event during the year was the approval of an adjustment in the pay plan by the State Personnel Board in the amount of approximately five percent. However this was not scheduled to be effective until the following fiscal year. The Personnel Board also established a new classification for licensed practical nurses to which a sizeable number of our employees have been transferred or promoted.

The Personnel Division managed the printing and publication of the first detailed organization chart ever given wide distribution at the Hospital as well as a new edition of the Hospital Policy and Procedures Manual containing formally approved policies and procedures established to date under a revised procedure.

Activity was extremely high for the year with total appointments once more establishing a new record. The increasing number of actions resulted from continuing enlargement of the Hospital staff, the addition of new positions in the budget and from reorganizations. The following is a tabulation of personnel actions during the year.

Appointments	1248	
Transfers	410	
Promotions	371	
Demotions	31	
Separations	760	including 604 Resignations
		82 Dismissals
		33 Retirements
		24 Transfers to other agencies
		17 Deaths

Rate of turnover 20.8%

A figure obtained by subtracting separations from appointments will not balance with the change in total employment since the latter is based on regular employees in pay status and does not include those on various types of leave without pay or employees on stipends.

A tabulation of personnel of the Hospital by type is shown on a separate page.

## PERSONNEL BY TYPE AS OF JUNE 30, 1967 and JUNE 30, 1968

E. B. DAVIS  
STATE AUDITOR

GEO. F. ARMSTRONG, C. P. A.  
DEPUTY STATE AUDITOR

January 6, 1969

Honorable Lester Maddox, Governor  
Members of the General Assembly  
Honorable John H. Venable, Director  
Department of Public Health  
Honorable James B. Craig, Superintendent  
Central State Hospital  
and  
Members of the State Board of Public Health

Ladies and Gentlemen:

We have made an audit of the financial records and accounts of the Central State Hospital for the fiscal year ended June 30, 1968, and submit herewith our report, with contents enumerated on the preceding page. Copy of the report has been filed as a permanent record in the office of the State Auditor and made available to the press of the State, as provided by Code Section 40-1805.

Our audit was made in accordance with generally accepted auditing standards, and accordingly included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances.

In our opinion, the accompanying Balance Sheet, Statement of Revenues and Expenditures, and Comments, together with supporting schedules, present the financial position of the Central State Hospital at June 30, 1968, and the department's financial transactions, as recorded on the modified accrual basis of accounting, for the fiscal year then ended, in conformity with accounting principles, applicable to units of the State Government.

All receipts disclosed by examination have been accounted for, and expenditures for the fiscal year ended June 30, 1968, were within the limits of budget approvals and supported by proper voucher, with exceptions, if any, shown in the Comments.

Respectfully submitted,

  
E. B. Davis  
State Auditor

EBD:ja

Examiner: E. L. Meeks

DEPARTMENT OF PUBLIC HEALTH  
CENTRAL STATE HOSPITAL

FINANCIAL CONDITION

The Central State Hospital, formerly Milledgeville State Hospital, ended the fiscal year on June 30, 1968, with current assets in the amount of \$6 107 785 63. The current assets were pledged to liquidate accounts payable in the amount of \$3 196 793 30.

After providing for payment of accounts payable, and providing reserves of \$227 401 99 for accounts receivable from sale of telephone facilities, \$1 610 856 27 for inventories, \$155 675 98 for building program, \$10 134 85 for Federal programs and \$898 281 99 for Private Trust and Agency Funds due at June 30, 1968, the Central State Hospital ended the year under review with a surplus of \$8 641 25, which is to be returned to the State Treasury.

COMPARISON OF APPROVED BUDGET TO ACTUAL REVENUES AND EXPENDITURES

The attached schedules have been prepared to reflect cash transactions, and revenues and expenditures on the modified accrual basis of accounting as applied to governmental activities.

Cash disbursements have been converted to actual expenditures on the modified accrual basis by elimination of payables at July 1, 1967, and the addition of all recorded liabilities due at June 30, 1968.

The total approved budget for the Central State Hospital as presented on page 15 of this report provided for expenditures totaling \$29 161 371 00. Costs of employer's contributions for retirement, social security and employee health insurance were allocated in the budget to the operating expense category. These items are classified more properly under personal services and have been so presented in the attached schedules. Adjustments have been made for the above items, and a comparison of budgeted revenues and expenditures to actual revenues and expenditures is summarized as follows:

DEPARTMENT OF PUBLIC HEALTH  
CENTRAL STATE HOSPITAL

- C O M M E N T S - cont'd

<u>REVENUES</u>	<u>BUDGETED</u>	<u>ACTUAL</u>	<u>OVER (-) UNDER</u>
State Appropriation	\$26 549 261 00	\$26 385 102 70	\$(-)164 158 30
Other Revenue Retained	2 612 110 00	2 313 355 92	(-)298 754 08
	<u>\$29 161 371 00</u>	<u>\$28 698 458 62</u>	<u>\$(-)462 912 38</u>
 <u>EXPENDITURES</u>			
Personal Services	\$19 891 404 68	\$19 274 662 78	\$(-)616 831 90
Operating Expense	7 386 376 32	7 325 331 09	(-) 61 045 23
Capital Outlay	1 883 500 00	1 727 824 02	(-)155 675 98
	<u>\$29 161 371 00</u>	<u>\$28 327 817 89</u>	<u>\$(-)833 553 11</u>
Excess of Revenues over Expenditures		\$ 370 640 73	\$ 370 640 73

Included in the statement of revenues and expenditures shown on pages 10 and 11 of this report is \$387 485 65 representing the cash value of surplus commodities donated to this hospital in the fiscal year under review. This amount has been deducted from the actual revenues and expenditures in the above statement, for comparison with the budget, as the value of surplus commodities was not and should not have been considered in preparing the budget, other than to determine the actual funds needed to operate the hospital.

The program for "Forgotten Children" is included in the above comparison. Shown separately, a comparison of budgeted revenues and expenditures to actual revenues and expenditures for the "Forgotten Children" program is summarized as follows:

<u>REVENUES</u>	<u>BUDGETED</u>	<u>ACTUAL</u>	<u>OVER (-) UNDER</u>
State Appropriation	\$ 171 261 00	\$ 115 056 45	\$(-) 56 204 55

PRIVATE TRUST AND AGENCY FUNDS

Private Trust and Agency Funds held by the hospital at the close of the fiscal year ended June 30, 1968, amounted to \$898 281 99, and consisted of \$37 102 69 in the Patients' Benefit Fund and \$861 179 30 in the Patients' Deposit Fund.

DEPARTMENT OF PUBLIC HEALTH  
CENTRAL STATE HOSPITAL

GENERAL

All receipts disclosed by examination for the period under review have been accounted for, and expenditures were within the limits of budget approvals and supported by proper voucher.

Books and records of the revenues and expenditures of the Central State Hospital are maintained in the Central Accounting office of the Department of Public Health in Atlanta, with cost accounts and Patients' Benefit and Deposit Funds carried at Milledgeville; all were found in good condition.

Surety bond coverage is under schedule bond, detail of which will be found in report of the Department of Public Health.

Appreciation is expressed to the officials and staff of both the Department of Public Health and the Central State Hospital for the cooperation and assistance given the State Auditor's office during this examination and throughout the year.
